JERRAMUNGUP AND UP!

Visit www.fertitech.com

VERY LOW RAINFALL, VERY LATE START, VERY IMPORTANT TO MAKE SURE YOUR SOWING PROGRAM WORKS QUICKLY! THEN THE WINDS BLOW AWAY TOPSOIL AND FURROWS FILL IN. NO MATTER WHAT THE SEASON DOES - HOT, COLD, WET OR DRY - OR WINDY; YOU CAN DODGE THE PROBLEMS AND BEAT IT.

FERTI-TECH CSA LIQUID INJECT DELIVERS VIGOUR

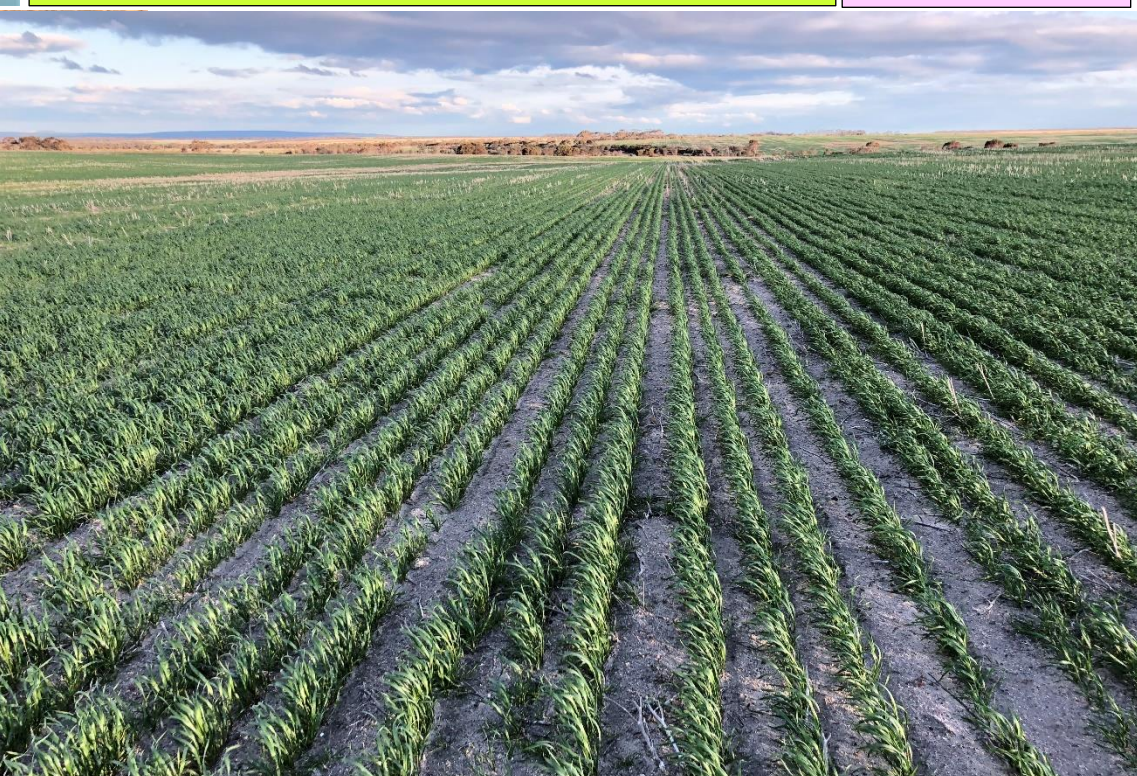

By the end of June there was zero to buggar-all sub-soil moisture at Jerramungup WA, but a few showers totalling 25mm during June did open a small window for sowing in early July. A pleasant surprise greeted our new client when the CSA Program Liquid Inject AgroCarbon/ AgroTrace and NuCAL got the new pasture sowing of Oats, Barley and Vetch up very quickly; despite the cold, without any signs of moisture stress. CSA Programs are well capable of collecting moisture and holding against stress. This property only had 38.5mm of rain from January to May total; so, the 25mm in June wasn't really encouraging but the chance was taken. July was better with 44mm and the sheep could graze the greenery which meant a lot to prospects. Then two very severe wind events blew away topsoil and buried all the good greenery in the furrow. **Top Slide Early August.** Despite suddenly becoming another 3-5cm deeper from the furrow-fill the Oats, Barley and Vetch grew through it and the greenery is returning quickly. There was plenty of established energy and enough moisture for the hypocotyls to extend again and re-surface; as well as allowing adventitious roots to develop within the higher ground level. Plenty of others in the district had to re-seed and spend again.

CSA LIQUID INJECT PROGRAMS TAKE CONTROL OF THE ROOT MASS 'GROW ZONE' AND CHEMICALLY INSTRUCT THE PLANT.

- AGROCARBON DRAWS MOISTURE INTO THE FURROW AND SETS UP A FERTILE TRADING ECONOMY
- AGROTRACE PROVIDES ESSENTIAL NUTRIENT SUPPORT
- NUCAL IS A HYPERSTIMULANT PLUS 'QUICK' CALCIUM

RAINFALL

0.0 mm JANUARY
 4.5 mm FEBRUARY
 12.0 mm MARCH
 5.0 mm APRIL
 17.0 mm MAY

SAMPLE DIGS FROM SEVERAL PROPERTIES USING CSA LIQUID INJECT IN THE GAIRDNER DISTRICT WA ARE ALSO SHOWING THE DRY PROFILE, THE LATE SOWING, THE COLD WINTER WEATHER AND THE SEVERE WINDS ARE NOT STOPPING PROGRESS.
