

a'Round The Traps'

May 2022

WINTER HAS ARRIVED!
Visit www.fertitech.com

Winter is on our doorstep, so it's time to check up on what is happening in your Growing Program with a view on how to advance the prospects going forward. In months prior, we've questioned the high risk cost of inputs, we have included a couple of photo's to show just how that system does work for the farmer. The newly germinating examples of a Barley Seed photo1 and a new pasture seeding program photo2. The Barley example is from Lake Grace & the Pasture Seed is from Boyanup. The good news is a beautiful full and robust germination, the cost inputs have been spread to support more efficiently

- 1) Soil Amendments i.e. Lime Pre-season according to soil.
- 2) Seed Enhancement of Phosphorus & Trace based Nutrients whilst cutting chemical costs down or out.
- 3) Combo of Liquid Inject & Granules to turbo the soil structure, come biology activation & now a greater more robust germination.

All kept within budgets. A flexible more Balanced System, just what the growing program actually needs. Less waste of dollars on inputs not really suited or needed in the first place. Question now is, how to move into winter and burst out into spring growth. Ask about our Z14 & Fat Cabbage Flyers for more Information on growing into Winter.

GERMINATION LIKE HAIRS ON A DOGS BACK! 😊

FERTI-TECH Australia Pty Ltd

VITA-LIK

MINERALIK

For ALL CATTLE CALVING & SHEEP STOCK LAMBING on Average Ryegrass or Mixed Pastures with Low Trace Element Values. Formulated for Improved Feed Utilisation.

20Kg

BENEFITS OF VITAMINS in StockLick Blocks and Loose Licks

Vitamin A is important for the function of the immune system, the health of epithelial tissues, mucous membranes, the eyes and the central nervous system. It is also important for reproductive performance and normal bone growth and development.

Vitamin E and Selenium are essential in livestock diets. Selenium is a trace element which works with vitamin E to prevent and repair cell damage in the body. Selenium and vitamin E both play a role in immune function and are vital for growth, reproduction, and preventing white muscle disease.

Vitamin D3 is important as it increases absorption of Calcium and Phosphorus from the digestive tract. This is important to aid the regulation of blood Calcium levels and the development of strong teeth and bones.

Shepherds Lamb\$aver™

The Smart and Simple In Paddock Bonding Pen - 5X or more Payback In First Season. Save More Lambs for Years to Come!

- Make Ewe and Lamb Bonding a Certainty.
- Ideal for Settling Maiden Ewes
- Close Contact for Ewes to bond well with Twins
- Ewes with Singles take Orphans as a Twin
- Ewes with a Stillborn take Orphans as their Own
- Maximising Food, Warmth, Shelter and Security
- Low centre of gravity for Maximum Stability
- Predator Protection – Foxes, Wild Dogs, Eagles
- Essential Wind Protection for Lambs
- Can be strapped and carried on Quad Bikes
