## How to Capitalize on the SEASON!

How do you capitalize on the extra moisture this season? Don't let the year get away from you wishing that you had of done more... every bit of yield is going to matter more than ever looking ahead. As Z.14 is generally too early to leaf test, we do it later to set the crop up just prior to Stem Elongation, for Z.30 (Fertility Strategic Foliar).

**SPECIAL OFFER**  
**BUY 3 GET 1 FREE**  
**TISSUE TESTS\* and REPORTS**  
\*Conditions Apply – Maximum 3 FREE Tissue Tests per Property. Offer Ends 31<sup>st</sup> July 2022

Wheat in Northern Victoria – T2.Z14 Foliar going out now across most of the country – See attached T2 Z.14 More Grain, to see the importance of why this foliar application is done, it is one of the most critical parts to the Carbon Systems Agronomy Program in cereals.

## Understanding Frost Better

Keeping the plants “finely tuned” during winter is going to greatly minimise any potential frost damage, as the sugars are so much higher in comparison to standard/conventional agronomy practices, see attached our Understanding Frost

Better Paper

Complex sugars take a lot more to freeze, regardless of the situation!
